FASTING IS NEITHER NECESSARY NOR RECOMMENDED.

RETREATMENT: Steps should be taken to control fleas and rodents on the premises in order to prevent reinfection; otherwise, retreatment will be necessary. This is especially true in cases of tapeworms transmitted by fleas (*Dipylidium caninum*) where reinfection is almost certain to occur if fleas are not removed from the animal and its environment. If reinfection occurs, tapeworm segments may be observed within one month of the initial treatment.

SIDE EFFECTS: Isolated incident of either vomiting, bloody stool or watery/profuse stool have been reported following treatment. If these signs are observed and they persist, consult your veterinarian.
